

ABDUL RAHAMAN LANSAH

*University for Development Studies, BSc in Mechanical Engineering, 3rd year;
Tuition and Housing Scholarships recipient*

Future Climate Change Scientist

Abdul grew up in a village, and his mother had poor health. Often, instead of going home after school, he went to a hospital to be with her.

His father single-handedly paid for his children's education and his wife's treatment. Although Abdul was that year's best student when he graduated high school, he couldn't even apply for college.

But he had always been an engineer at heart. He loved challenges that made him think, even when he couldn't solve them. His dream is to work with his peers to take on national challenges, like energy inefficiency in Ghana. His goal is to lower energy consumption and preserve nature by using solar, geothermal, hydropower, and wind energy.

That's why we are so glad he could make it to college on our scholarship and he is learning all about energy and thermal fluids in classrooms and from the industry.

Support us to make Abdul's dream come to pass!
