

Priscilla O. Sarfoah's
1st Year, Medical Laboratory Technology Student
Kumasi Technical University, KTU

Priscilla O. Sarfoah's Story

"I am a level 100 student of Kumasi Technical University, pursuing BTECH. MEDICAL LABORATORY TECHNOLOGY. I come from a family of five (my parents, my two siblings, and myself). I am the second of my parents.

My father is a Pastor, and my mother is a petty trader who sells soaps. After my senior high school education, I wanted to work and save towards the furthering of my education but my search for jobs was futile. I ended up at the market helping my mum in her petty trading.

Although my father is a pastor the money, he earns at the end of every month is not enough to cater for our small family, my family, therefore, struggles to make ends meet hence our main source of livelihood is my mother's business which is going into bankruptcy. Gathering money for my admission was not an easy hurdle to cross but for God's grace through hard work. If selected as a beneficiary, I vow to make the foundation proud of me as well as our beloved country (Ghana). I love to learn new things. Perseverance and determination are the middle names that are to say I achieve anything or everything I set my mind to do. Hopefully getting this scholarship will help me achieve my goals and I need all the focus I could master to be excellent in what I do.

Accessible and affordable healthcare is one of the major problems of our beloved country, Ghana. This scholarship will give me the financial support to see me through school and become one of the best Medical Laboratory Scientists in this country has ever had. I will help in the provision of attainable medical services to underserved communities in the nation".

JEQ Foundation is now supporting Priscilla with her tuition and residential scholarships, and she is on her way to becoming a good medical laboratory scientist.
