

## **Hayford Service-Learning Experience**

I had the opportunity to volunteer at Ghana Water Company Limited. I was supervised in:

- Taking readings of electrical and mechanical meters, gauge pressure, and the voltmeter.
- Checking of the flocculation of water in the flocculation chamber
- Addition and checking of alum and chlorine to the water
- Dislodging of wastewater
- Monitoring the clear water level to avoid overflow of the water
- Pumping of water to fill the up-wash tank for backwashes.

JEQ Foundation is proud of you, Hayford, continue with the good work and always remember to give back to your local community.
